# SWITCHSTICK

The Switchstick is a 2, 4, or 8-way joystick with 4 keyboard switches mounted at the end of the X and Y axis travel. This self-centering, center-off joystick activates once the joystick handle is moved 8° from center. Ideal for keyboard placement, the Switchstick can also be used for any other application requiring simple 2, 4, or 8 way movement. The Switchstick comes with a square mounting bezel for panel mounting and a choice of 8 different joystick handles.
