Teledyne Test Tools new T3DSO1000 Oscilloscopes feature two channel and four channel models. The two channel models are available with 100 MHz, 200 MHz and 350 MHz analog bandwidths, a single ADC with up to 2 GSa/s maximum sample rate, and memory up to 28 Mpts. The four channel scope is available in 100 and 200 MHz models and incorporates two 1 GSa/s ADCs and two 14 Mpts memory modules. When all channels are enabled, each channel has sample rate of 500 MSa/s, or 1 GS/s for the A series, and a standard record length of 7 Mpts, or 14 Mpts for the A Series. When only a single channel per ADC is active, the maximum sample rate and the maximum record length are doubled.

For ease-of-use, the most commonly used functions can be accessed with its user-friendly front panel design.

The T3DSO1000 series employs a new generation of high speed display technology that provides excellent signal clarity, fidelity and performance. The system noise floor is also lower than similar products in the industry. It comes with a minimum vertical input range of 500 uV/div, an innovative digital trigger system with high sensitivity and low jitter, and a waveform capture rate of 400,000 frames/sec (sequence mode). The T3DSO1000 also employs a 256-level intensity grading display function and a color temperature display mode not found in other models in this class. Teledyne Test Tools latest oscilloscope offering supports multiple powerful triggering modes including serial bus triggering. Serial bus decoding for IIC, SPI, UART, CAN, LIN bus types is included. The models also include History waveform recording, and sequential triggering that enable extended waveform recording and analysis.

Another powerful addition is the new 1 million point FFT math function that gives the T3DSO1000 very high frequency resolution when observing signal spectra. The new digital design also includes a hardware co-processor that delivers measurements quickly and accurately without slowing acquisition and front-panel response. The features and performance of Teledyne Test Tools T3DSO1000 family cannot be matched in this price class.

The four channel and A series includes even more functions, including: searching and navigating, on-screen Bode plot, 16 digital channels (Option), an external USB powered 25 MHz AWG module (Option), a USB WIFI adapter (Option), and an embedded application that allows remote control via web browser.

FUNCTION & CHARACTERISTICS

7 inch TFT-LCD display and 10 one-button menus

Front panel of T3DSO1104, T3DSO1202A, T3DSO1204, T3DSO1302A

Front panel of T3DSO1102

- 7-inch TFT-LCD display with 800 * 480 resolution
- Most commonly used functions are accessible using 10 different one-button operation keys: Auto Setup, Default, Cursor, Measure, Roll, History, Persist, Clear
- Sweep, Zoom, Print

Record Length of Up to 28 Mpts depending on model and channels (single channel/pair mode).

Using hardware-based Zoom technologies and max record length of up to 28 Mpts, users are able to over-sample to capture longer time periods at higher resolution and use the zoom feature to see more details within each signal.

When all channels are enabled, each channel has a maximum sample rate of up to 1 GSa/s (depending on the model)
When a single channel per pair is active, that channel has sample rate of up to 2 GSa/s (depending on the model)

The four channel series has two 1 GSa/s ADC chips (channel 1 and 2 share one, channel 3 and 4 share another), so that each channel can achieve sample rates up to 500 MSa/s and work on bandwidths of 200 MHz when all channels are enabled.

Waveform Capture Rate Up to 400,000 wfms/s

With a waveform capture rate of up to 400,000 wfms/s (sequence mode), the oscilloscope can easily capture the unusual or low-probability events.

256-Level Intensity Grading and Color Temperature Display

New display technology provides for fast refresh rates. The resulting intensity-graded trace is brighter for events that occur with more frequency and dims when the events occur with less frequency.

The color temperature display is similar to the intensity-graded trace function, but the trace occurrence is represented by different colors (color "temperature") as opposed to changes in the intensity of one color. Red colors represents the more frequent events, while blue is used to mark points that occur least frequently.

Serial Bus Decoding Function (Standard)

T3DSO1000 displays the decoding through the events list. Bus protocol information can be quickly and intuitively displayed in a tabular format.

History Waveforms (History) Mode and Segmented Acquisition (Sequence)

Playback the latest triggered events using the history function. Segmented memory collection will store trigger events into multiple (Up to 80,000) memory segments, each segment will store triggered waveforms and timestamp each frame.

True measurement to 14 M points or 28 M points depending on the model

At any one timebase, T3DSO1000 can measure using all acquired sample points. This ensures the accuracy of measurements while the math coprocessor decreases measurement time and increases ease-of-use.

Gate and Zoom Measurement

Through Gate and Zoom measurement, the user can specify an arbitrary interval of waveform data analysis and statistics. This helps avoid measurement errors that can be caused by invalid or extraneous data, greatly enhancing the measurements' validity and flexibility.

FUNCTION & CHARACTERISTICS

1 M points FFT

The math co-processor enables FFT analysis of incoming signals using up to 1 M samples per waveform. This provides high frequency resolution with a fast refresh rate. The FFT function also supports a variety of window functions so that it can adapt to different spectrum measurement needs.

Hardware-Based High Speed Pass/Fail function

The T3DS01000 utilizes a hardware-based Pass/Fail function, performing up to 40,000 Pass/Fail decisions each second. Easily generate user defined test templates provide trace mask comparison making it suitable for long-term signal monitoring or automated production line testing.

Customizable Default Key

The current parameters of the oscilloscope can be preset to Default Key through the Save menu.

16 Digital Channels/MSO (Option not available on the T3DS01102)

16 digital channels enables users to acquire and trigger on the waveforms then analyze the pattern, simultaneously with one instrument. Color coded logic levels clearly differentiate high and low states.

Search and Navigate (not available on the T3DS01102)

The T3DS01000 series can search events specified by the user in a frame. It can also navigate by time (delay position) and historical frames. Search and Navigate is not available on the T3DS01102.

Bode Plot (not available on the T3DSO1102)

T3DSO1000 can control the USB AWG module, control an independent Teledyne Test Tools T3AFG instrument, scan an object's amplitude and phase frequency response, and display the data as a Bode Plot. It can also show the result lists, and export the data to a USB disk. Not available for the T3DSO1102.

USB WiFi Adapter (Option not available on the T3DSO1102)

WiFi control of instrumentation can provide a convenient and safe method of configuring and collecting data. This new feature works with a Teledyne Test Tools approved WiFi adapter to provide wireless control and communications with Teledyne Test Tools 4 channel scopes. Option not available for the T3DSO1102. The approved adapter is the TP-Link TL-WN725N (not supplied).

USB 25 MHz AWG Module (Option not available on the T3DSO1102)

The T3DSO1000 series supports an optional USB 25 MHz function/arbitrary waveform generator that is operated from the USB host connection. Functions include Sine, Square, Ramp, Pulse, Noise, DC and 45 built-in waveforms. The arbitrary waveforms can be accessed and edited by the Teledyne Test Tools PC software. Option not available for the T3DSO1102.
