GET THE RIGHT PRODUCT FOR YOUR NEEDS

MO-5 standard version

MO-5 standard series is a complete product portfolio intended for typical loads in automotive applications, such as a high beam, low beam, turn indicator, interior lighting. For each $R_{DS(on)}$ rating, single-, dual- and quad-channel options are available. Moreover, the devices are equipped with digital diagnostics or with analog current sense.

MO-5Enhanced version

In addition to the standard protection and diagnostic features, MO-5Enhanced products offer:

- Extended load compatibility due to higher current limitation
- Immediate diagnosis reaction over short-to-ground or overload (power limitation detection)
- Open-load/short-to- V_{CC} detection in off-state for the analog current sense option as well

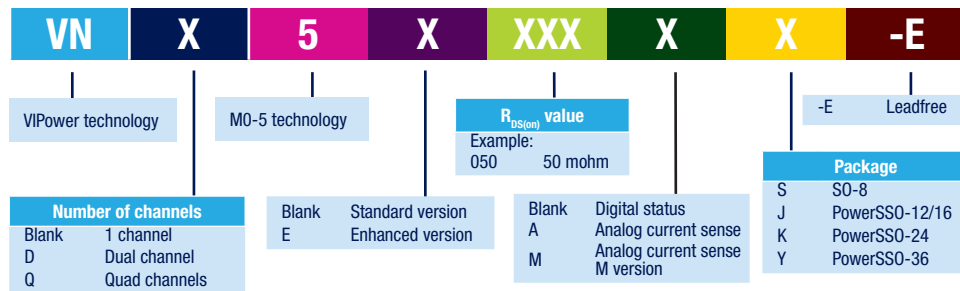

MO-5Enhanced M version

The M versions complete the product portfolio with devices having the same specification as MO-5Enhanced except for the open-load detection in off-state.

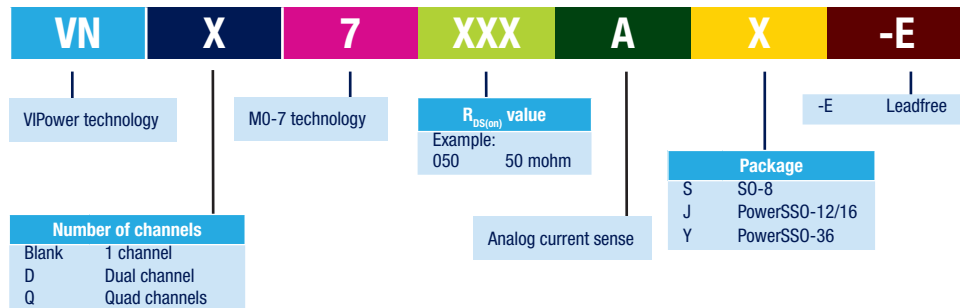

MO-7 version

The brand new MO-7 Product Family further extends the wide range of $R_{DS(on)}$ for optimal device-load pairing in smaller packages and with full pin-to-pin compatibility.
