

Kitronik :Move Motor for the BBC micro:bit

The Kitronik :MOVE Motor for the BBC micro:bit provides a fun introduction to buggy robotics. There are built-in battery holders for 4x AA batteries. This provides a regulated voltage supply to power the BBC micro:bit which is fed into the edge connector. There is also a power switch to conserve batteries when the buggy is not in use.

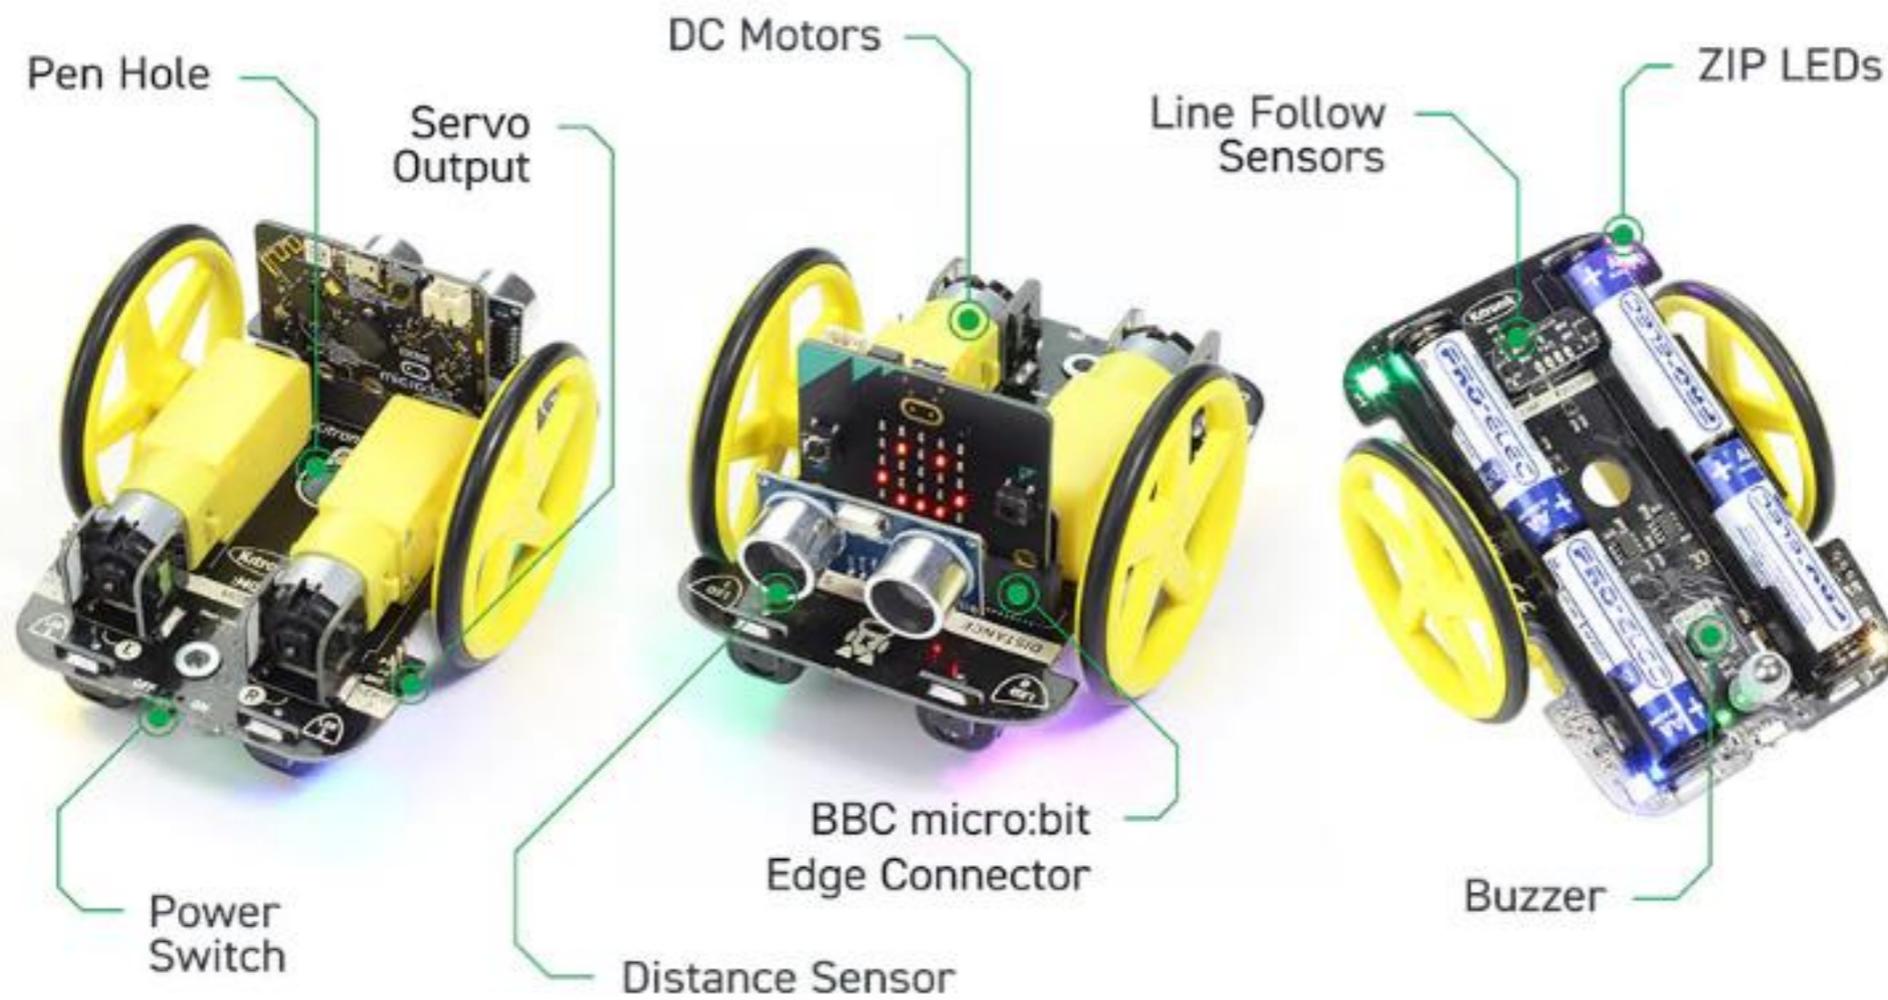

The micro:bit slots into the onboard edge connector. Code the micro:bit, plug it into the buggy, switch the power on, and then play. All of the tutorials and resources are free. There is no soldering required and assembly is quick and super simple.

:MOVE Motor can be coded using the Microsoft MakeCode editor. Kitronik has produced a set of custom MakeCode blocks to simplify coding the completed buggy. The booklet that comes with the buggy contains more detailed instructions on using the blocks and writing code. The :MOVE Motor can also be coded with Python.

A booklet is included in the box which contains some quick tutorials to get you started. There are also additional online tutorials and step by step guides for extra projects.

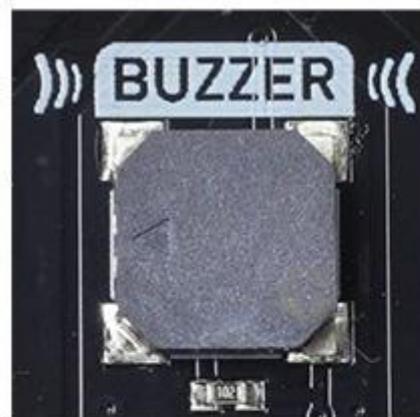

Product Overview

Features

- The Kitronik :MOVE Motor for the BBC micro:bit provides a fun introduction to buggy robotics and coding.
- It is backed up by a range of fun tutorials to introduce you to all of the great features.
- All of the tutorials and resources are free.
- There is no soldering required and assembly is quick and super simple.
- The buggy features two bi-direction DC motors.
- There are ultrasonic distance and line-following sensors onboard.

Sound the Horn

Use the Piezo Buzzer to beep the horn, or sound a siren

Packed with sensors

Integrated Ultrasonic and Line Following sensors for out of the box autonomy

Made For micro:bit

From Beginner to Expert with Custom MakeCode blocks and example Python code.

ZIP LEDs

Light up your coding with 4 fully controllable RGB LEDs. Add indicators, headlights or Emergency Vehicle Lights

- It also features a Piezo sounder and pen mount.
- There are 4 full-colour programmable ZIP LEDs.
- Two-pin outputs that are ideal for servo connections (can be used for other inputs and outputs).
- The battery holder is built onto the chassis.
- The buggy is also fitted with a power switch to conserve the batteries.
- There is also an onboard edge connector for the micro:bit, code, plug and play.
- Kitronik has produced custom MakeCode blocks to simplify coding with the MakeCode editor.

Contents

- 1 x :MOVE Motor chassis.
- 2 x Wheel and tyres.
- 1 x Booklet

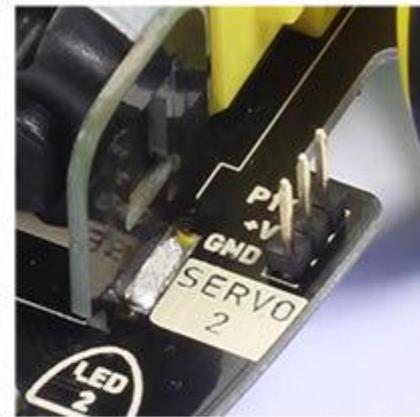

Dimensions

- 111mm x 90mm (with wheels attached) x 67mm

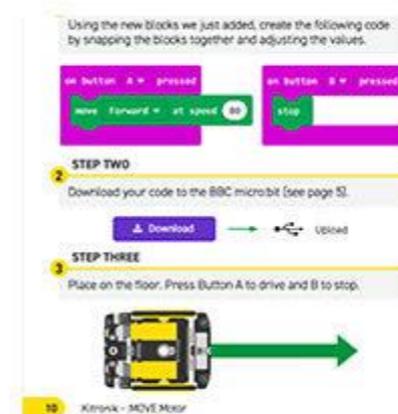

Designed for Drawing

Add a pen to unleash your creative side

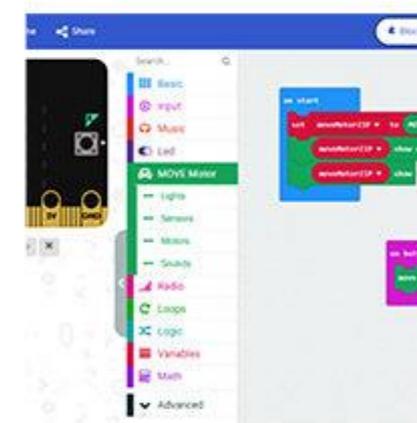

Servo Connections

Expand your control by plugging in servos to dedicated headers

Detailed Tutorials

Step-by-step tutorials to help make learning fun and easy

Simple Code

Microsoft MakeCode Editor is as easy as 1, 2, 3. Just click, drag and drop.

Notes

- This kit does not include a micro:bit, a micro:bit can be obtained from [here](#).
- No soldering is required!
- Minimal assembly is required.

Requires

- 1 x micro:bit.
- 1 x USB Type-A to Micro-B USB Noodle Cable.
- 4 x AA batteries.
