

Black Rubber Joystick Nubbin Cap for Navigation Joystick

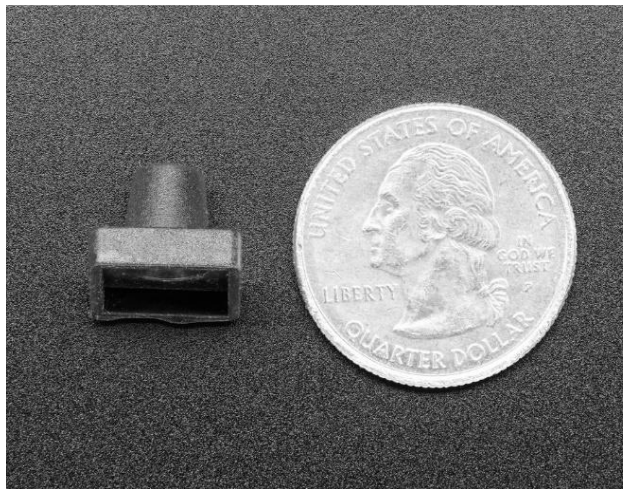

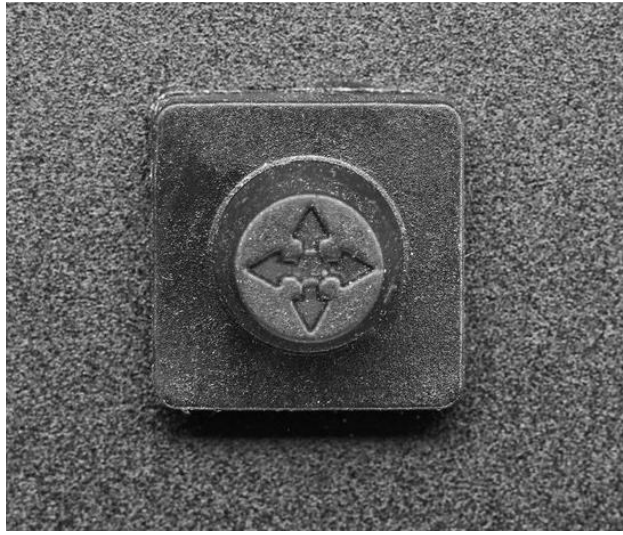

PRODUCT ID: 4697

A new tiny squishy delight! This Black Rubber Joystick Nubbin Cap is the perfect add-on to any of your projects with a 5-way navigation joystick, like our Adafruit Mini Color TFT with Joystick FeatherWing or Adafruit 128x64 OLED Bonnet for Raspberry Pi. Fits perfectly on classic 5-way navigation joysticks like this one.

It's solid, sturdy, and presses on firmly. We especially dig the cute directional etching. Pop it onto a joystick, and you're ready to thumb-mash to your heart's content with comfort

Go ahead, flickety-flick all you like! (It's durable and easy to clean, just wipe with mild soap and water)

Note: This is *just* the black rubber cap you can pick up a matching navigation stick [here](#)
