Description

The Power PLCC-4 SMT LED with Lens are high performance PLCC-4 package size SMT LEDs targeted mainly in Automotive & Electronics Signs and Signals (ESS) markets. These top-mount single-chip packages with focused radiation offer high brightness in beam direction and are excellent for interior automotive, indoor and outdoor sign and industrial applications. With additional lens in 50° variants, these products are especially fitting to applications for Mono-color Text Display, CHMSL and displays.

The PLCC-4 package family is able to dissipate heat better compared to the PLCC-2 packages. In proportion to this increase in driving current, this family of LEDs is able to produce higher light output compared to the conventional PLCC-2 SMT LEDs.

As an extension of the standard flat top PLCC-4 SMT LEDs, the Power PLCC-4 with Lens device is able to provide focused beams within narrow viewing angles (50°) meeting the market's requirements for focused radiation and high brightness in beam directions.

The Power PLCC-4 SMT LED with 50° is ideal for panel, push button, general backlighting, automotive interior & exterior (cluster backlighting, side repeaters, brake lights), sign and symbol illumination, office equipment, industrial equipment and home appliances applications. This package design coupled with careful selection of component materials allow the Power PLCC-4 SMT LED with Lens to perform with higher reliability in a larger temperature range -40°C to 100°C. This high reliability feature is crucial to allow the Power PLCC-4 SMT LED with Lens to do well in harsh environments such as its target Automotive & ESS markets.

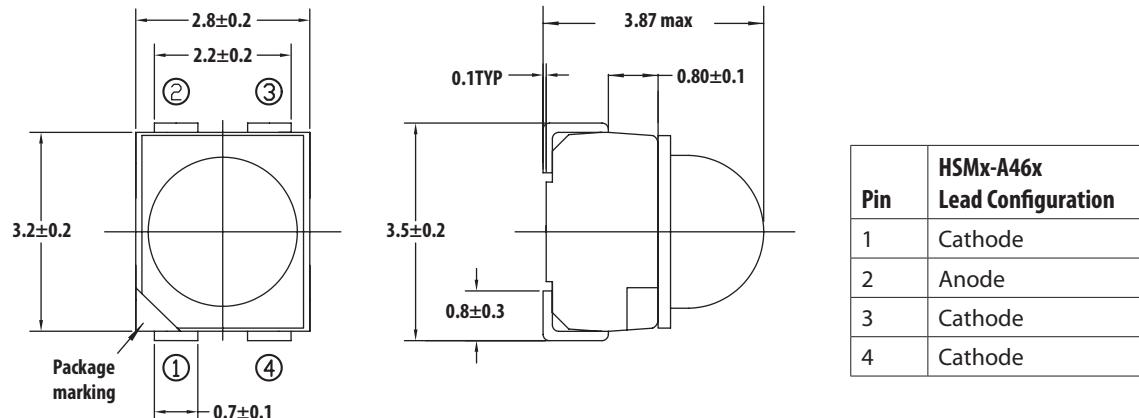

Features

- Industry standard PLCC-4
- High reliability LED package
- High brightness using AlInGaN and InGaN dice technologies
- High optical efficiency
- Narrow Viewing angle at 50°
- Available in 8mm carrier tape on 7-inch reel

Applications

- Interior automotive
 - Instrument panel backlighting
 - Central console backlighting
 - Cabin backlighting
 - Navigation and audio system
 - Dome lighting
 - Push button backlighting
- Exterior automotive
 - Turn signals
 - CHMSL
 - Rear combination lamp
 - Side repeaters
- Office automation, home appliances, industrial equipment
 - Front panel backlighting
 - Push button backlighting
 - Display backlighting

Notes:

1. The dominant wavelength, λ_D , is derived from the CIE Chromaticity diagram and represents the color of the device.
2. $\theta_{1/2}$ is the off-axis angle where the luminous intensity is $1/2$ the peak intensity.
3. Radiant intensity, I_e in watts / steradian, may be calculated from the equation $I_e = I_V / \eta_V$, where I_V is the luminous intensity in candelas and η_V is the luminous efficacy in lumens / watt.
4. Φ_V is the total luminous flux output as measured with an integrating sphere at mono pulse conditions.

Moisture Sensitivity

This product is qualified as Moisture Sensitive Level 2a per Jedec J-STD-020. Precautions when handling this moisture sensitive product is important to ensure the reliability of the product. Do refer to Avago Application Note AN5305 Handling of Moisture Sensitive Surface Mount Devices for details.

A. Storage before use

- Unopen moisture barrier bag (MBB) can be stored at <40°C/90%RH for 12 months. If the actual shelf life has exceeded 12 months and the HIC indicates that baking is not required, then it is safe to reflow the LEDs per the original MSL rating.
- It is not recommended to open the MBB prior to assembly (e.g. for IQC).

B. Control after opening the MBB

- The humidity indicator card (HIC) shall be read immediately upon opening of MBB.
- The LEDs must be kept at <30°C / 60%RH at all time and all high temperature related process including soldering, curing or rework need to be completed within 672 hours.

C. Control for unfinished reel

- For any unuse LEDs, they need to be stored in sealed MBB with desiccant or desiccator at <5%RH.

D. Control of assembled boards

- If the PCB soldered with the LEDs is to be subjected to other high temperature processes, the PCB need to be stored in sealed MBB with desiccant or desiccator at <5%RH to ensure no LEDs have exceeded their floor life of 672 hours.

E. Baking is required if:

- "10%" is Not blue and "5%" HIC indicator turns pink.
- The LEDs are exposed to condition of >30°C / 60% RH at any time.
- The LEDs floor life exceeded 672 hours.

Recommended baking condition: $60\pm5^\circ\text{C}$ for 20 hours.
