Power frequency magnetic field	EN61000-4-8	100A/m continuous; 1000A/m 1 second	Perf. Criteria A

Note:

- Input source impedance: The power module will operate as specifications without external components, assuming that the source voltage has a very low impedance and reasonable input voltage regulation. Highly inductive source impedances can affect the stability of the power module. Since real-world voltage source has finite impedance, performance can be improved by adding external filter capacitor.
The QAE60-36S□□U recommended Nippon Chemi-con KY series, 220 μF /100V.
The QAE60-72S□□U recommended Nippon Chemi-con KXJ series, 150 μF /200V.
- BASE-PLATE GROUNDING: When connect two screw bolts to shield plane, the EMI could be reduced.

CAUTION: This power module is not internally fused. An input line fuse must always be used.

QAE60-72S05U Efficiency vs. Output Load

FUSE CONSIDERATION

This power module is not internally fused. An input line fuse must always be used.

This encapsulated power module can be used in a wide variety of applications, ranging from simple stand-alone operation to an integrated part of sophisticated power architecture.

To maximum flexibility, internal fusing is not included; however, to achieve maximum safety and system protection, always use an input line fuse.

The input line fuse suggest as below :

Model	Fuse Rating (A)	Fuse Type
QAE60-36S□□U	12	Fast-Acting
QAE60-72S□□U	8	Fast-Acting

The table based on the information provided in this data sheet on inrush energy and maximum DC input current at low Vin.

THERMAL CONSIDERATIONS

The power module operates in a variety of thermal environments.

However, sufficient cooling should be provided to help ensure reliable operation of the unit.

Heat is removed by conduction, convection, and radiation to the surrounding Environment.

Proper cooling can be verified by measuring the point as the figure below.

The temperature at this location should not exceed "Maximum case temperature".

When Operating, adequate cooling must be provided to maintain the test point temperature at or below "Maximum case temperature".

You can limit this Temperature to a lower value for extremely high reliability.

- Thermal test condition with vertical direction by natural convection (20LFM).
- The iron base-plate dimension is 19" X 3.5" X 0.063" (The height is EIA standard 2U).
- The heat-sink is optional and P/N: 7G-0029B-F, 7G-0030B-F, 7G-0031B-F, 7G-0032B-F, 7GA0124P01-F, 7GA0125P01-F.

TYPICAL APPLICATION

■ UVLO

This series product has ultra wide input range. It could cover many kind of nominal input voltage in one module. In order to preventing incorrect operating under different input system, it offers UVLO adjustment by connecting a resistor to set UVLO threshold.

■ UVLO Constants

Model	A	B	C
QAE60-36S□□U	48000	8273	0.96
QAE60-72S□□U	120000	12500	2.4

■ UVLO Equation

Start-up Voltage

$$V_{\text{start-up}} = 1.25 \times \left[\frac{A \times (R_{\text{UVLO}} + B)}{R_{\text{UVLO}} \times B} + 1 \right]$$

Shutdown Voltage

$$V_{\text{shutdown}} = V_{\text{start-up}} - C$$

■ UVLO values for various nominal input voltage and R_{UVLO} table

QAE60-36S□□U

Nominal Vin	12V	24V	36V	48V
Start-up voltage	8.46 V	13.36 V	20.56 V	27.76 V
Shutdown voltage	7.5 V	12.4 V	19.6 V	26.8 V
UVLO Setting resistor	Open	12.35 KΩ	4.98 KΩ	3.12 KΩ

QAE60-72S□□U

Nominal Vin	24 V	36 V	48 V	72 V	96 V	110 V
Start-up voltage	14.8 V	22 V	29.2 V	43.6 V	58 V	66.4 V
Shutdown voltage	12.4 V	19.6 V	26.8 V	41.2 V	55.6 V	64 V
UVLO Setting resistor	96.77 KΩ	17.14 KΩ	9.40 KΩ	4.94 KΩ	3.35 KΩ	2.82 KΩ

■ Hold Up Time

Generally, connecting a large number of hold up capacitors on input are necessary to get a long duration of hold up time for S2, C2 described in EN50155. The Bus pin features excellent function can simply connect capacitors to Bus pin with less quantity of capacitors. It helps reduce layout area and smooth the inrush current. For further information, please contact P-DUKE.

OUTPUT VOLTAGE ADJUSTMENT

Output voltage is adjustable for 10% trim up or -20% trim down of nominal output voltage by connecting an external resistor between the Trim pin and either the +Sense or -Sense pins.

With an external resistor between the Trim and -Sense pin, the output voltage set point decreases.

With an external resistor between the Trim and +Sense pin, the output voltage set point increases.

Maximum output deviation is +10% inclusive of remote sense.

The external TRIM resistor needs to be at least 1/8W of rated power.

Trim Up Equation

$$R_U = \left(\frac{5.11V_{OUT}(100 + \Delta\%)}{1.225\Delta\%} - \frac{511 + 10.22\Delta\%}{\Delta\%} \right) k\Omega$$

Trim Down Equation

$$R_D = \left(\frac{511}{\Delta\%} - 10.22 \right) k\Omega$$

EXTERNAL OUTPUT TRIMMING

Output can be externally trimmed by using the method shown below.

Trim-up
